Water leaks in XNP-9250R camera bodies

|                |           |              |   |
|----------------|-----------|--------------|---|
| No.            | # 1       | Product Line | Network Camera  |
| Product(Model) | XNP-9250R | Keyword      | Reverse direction, Water leaks, Submersion, IP rating |

1. Installation Cases

- Hanwha Vision’s PTZ camera was installed for surveillance outside the office building.
- The camera was installed in reverse direction upon separate request from the end user.

2. Symptoms

- When disassembling cameras which couldn't be turned on, traces of water leaks were found in the camera bodies.

3. Causes

- Water couldn't be discharged from the PAN rotation bearing part due to a camera installed in the reverse direction, which made it difficult to guarantee its waterproofing. As a result, water remained in the part.
- The waterproof and dustproof rating of XNP-9250R is IP66 (spraying water, dripping water )
- Protection against water not discharged is guaranteed with IP67 (immersion), not with IP66.

4. Measures

- It is recommended to install the camera in the correction direction.
- The reference point for product installation is the logo printed on the product, which must be displayed properly as shown in the photo below.

< e.g. product installation in the correct direction >

## Problem of camera audio use setting cancellation after reboot

|                |          |              |  |
|----------------|----------|--------------|--|
| No.            | # 2      | Product Line | Network Camera                                     |
| Product(Model) | XNP-6320 | Keyword      | Profiles, Enabling audio use, Setting cancellation |

### 1. Installation Cases

- The network camera was installed for security surveillance (including voice notification) in general office buildings

### 2. Symptoms

- Rebooting the system after changing the camera setting to use audio (enabling the 'Audio in' option in the profile)
- The 'Audio in' option became unchecked after reboot.

Name

H.264

Codec

H.264

Profile type

☒ Default profile

☐ Record profile

☐ Digital PTZ profile

☐ Frame Lock profile

Audio in

☒ Enable

### 3. Causes

- When the system rebooted after changing the camera settings, the settings of the last connected device (NVR/SSM, etc.) were retrieved in the process of restoring the settings. As a result, the problem of setting cancellation occurred.

### 4. Measures

- (1) Refer to the path below to first enable the audio use item on the storage device, then
- (2) Then enable the audio input item for each camera profile.

Record setup

Path: Settings → Save → Save Settings → Audio

Total bitrate (limit/max) 396.0 / 400 Mbps

| CH | Camera name | IP address   | Continuous recording | Event recording | Continuous recording |         | Limit | Event |      | Audio |
|----|-------------|--------------|----------------------|-----------------|----------------------|---------|-------|-------|------|-------|
|    |             |              |                      |                 | Full frame           | I-frame |       | Pre   | Post |       |
| 1  | CAM 01      | 192.168.1.10 | Full                 | Full            | 8 M                  | 5 s     | 5 s   | Off   |      |       |
| 2  | CAM 02      | 192.168.1.11 | Full                 | Full            | 6 M                  | 5 s     | 5 s   | On    |      |       |
| 3  | CAM 03      | 192.168.1.13 | Full                 | Full            | 20 M                 | 5 s     | 5 s   | Off   |      |       |
| 4  | CAM 04      | 192.168.1.14 | Full                 | Full            | 5 M                  | 5 s     | 5 s   | Off   |      |       |
| 5  | CAM 05      | 192.168.1.14 | Full                 | Full            | 5 M                  | 5 s     | 5 s   | Off   |      |       |

The bullet camera rear assy damaged within 1 month of its installation

|                |            |              |   |
|----------------|------------|--------------|---|
| No.            | # 3        | Product Line | Network Camera                                    |
| Product(Model) | KNO-V2020R | Keyword      | Electrically-drive tools, Rear Assy, Joint damage |

1. Installation Cases

- The network camera was installed for security surveillance in general office buildings

2. Symptoms

- There was a risk of the camera falling due to damage to the joints of its rear assy within 1 month after its installation.

3. Causes

- Cracks caused by fastening the fixing screw with an electrically-drive tool.
- Cracked products randomly repaired and installed with instant adhesive.

4. Measures

- Use manual tools to prevent torque overload when tightening bolts.
- In particular, do not use electrically-drive tools to secure areas where plastic and metal meet.

FAN noise of the housing-integrated PTZ camera

|                |            |              |  |
|----------------|------------|--------------|--|
| No.            | # 4        | Product Line | Network Camera                                 |
| Product(Model) | XNP-L6252H | Keyword      | Housing, FAN noise, Bracket, Recessed mounting |

1. Installation Cases

- The housing-integrated network PTZ camera was installed for security surveillance within religious facilities

2. Symptoms

- Severe noise and ceiling vibration occurred during fan operation due to heat generation inside the camera.

3. Causes

- Improper product installation: Outdoor housing camera installed in the form of recessed mounting in the indoor ceiling
- The housing arbitrarily modified (laser processed) for camera installation in the form of recessed ceiling mounting on site
- The Fan noises from FAN operation along with the ceiling vibrating sound from loosened mechanical operating parts

< Actual installation view >

4. Measures

- Be sure to check the product's purpose and manual before installing it, and arbitrary modifications are subject to limited service warranty.
- When selecting a product, refer to the Product Naming Rule on the website
- H: Housing models cannot be installed by recessed mounting in an indoor ceiling.

|---------------------------------------|---------------------------------------|--------------------------|----------------|
| ▪ A : Revision                        | ▪ B : Black Color                     | ▪ C : Counting or Corner | ▪ D : Dual Eye |
| ▪ E : Explosion Proof or PoE extender | ▪ F : Flush or SFP LC (Fiber Channel) | ▪ G : Government         | ▪ H : Housing  |

## Failure to detect loitering events within the IVA-designated area

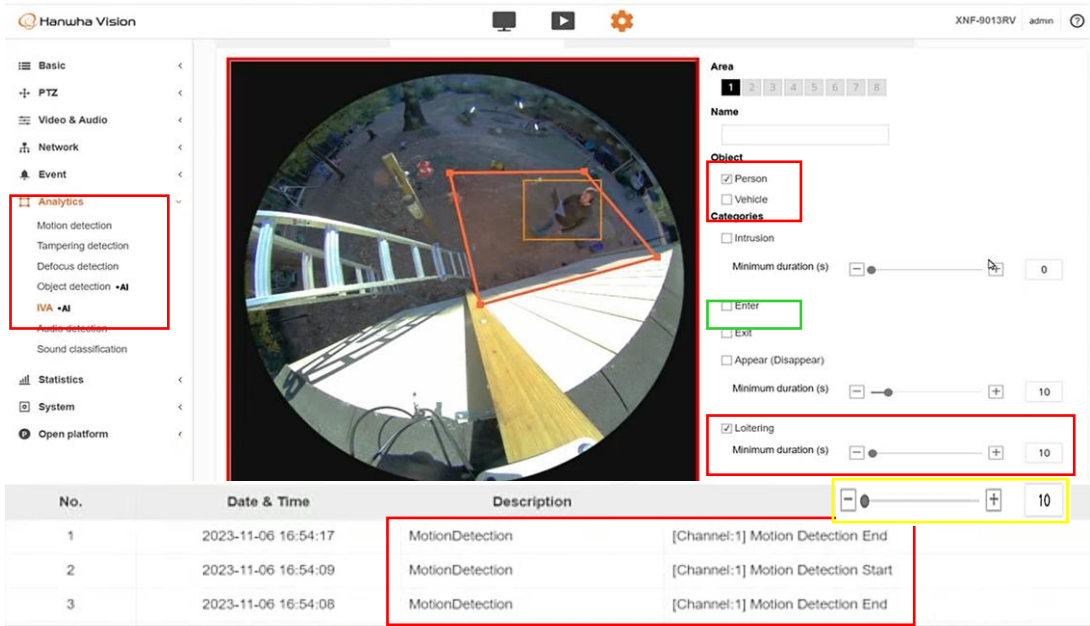

|                |            |              |                |
|----------------|------------|--------------|----------------|
| No.            | # 5        | Product Line | Network Camera |
| Product(Model) | XNF-9013RV | Keyword      | IVA, Loitering |

### 1. Installation Cases

- The IVA loitering detection option was enabled after installing the camera, XNF-9013RV, for the security around the building

### 2. Symptoms

- Loitering detection was set by specifying the IVA area, but the event was not detected.
- Conditions: Object-Person, Categories-Loitering, minimum duration (s)-minimum value (10 seconds)
- Result: The event was recognized as 'motion detection' rather than 'loitering detection'.

The screenshot displays the Hanwha Vision web interface. On the left, the 'Analytics' menu is expanded, with 'IVA-AI' highlighted. The main area shows a camera feed with a red IVA area and a person. To the right, the IVA settings are configured: 'Object' is set to 'Person', 'Categories' is set to 'Loitering', and 'Minimum duration (s)' is set to 10. Below the settings, a table shows event logs:

| No. | Date & Time         | Description  |
|-----|---------------------|--|
| 1   | 2023-11-06 16:54:17 | MotionDetection [Channel:1] Motion Detection End   |
| 2   | 2023-11-06 16:54:09 | MotionDetection [Channel:1] Motion Detection Start |
| 3   | 2023-11-06 16:54:08 | MotionDetection [Channel:1] Motion Detection End   |

### 3. Causes

- Since the object to be detected does not show its continuous movement, it does not meet the loitering detection conditions.
- In the following cases, the target loitering object became undetectable as the system considered it disappeared.
  - a. When the target object didn't move for a certain period of time
  - b. When the target object overlapped another object
  - c. When the environment was complex because there was a moving object in the vicinity of the target object

### 4. Measures

- Set both 'Loitering' and 'Enter' conditions for IVA

The NVR password reset button not working

|                |           |              |                 |
|----------------|-----------|--------------|-----------------|
| No.            | # 6       | Product Line | NVR             |
| Product(Model) | XRN-1610S | Keyword      | Password, Reset |

1. Installation Cases

- The site Admin was changed after installing the NVR for commercial building monitoring.

2. Symptoms

- It was impossible to access the system with admin privileges due to the lost password
- It was impossible to reset the password by pressing the small hole on the back of the system with a sharp tool.

3. Causes

- The [Password Reset] button on the back of the product was damaged by repeatedly pressing it with excessive pressure.
- The button can be considered to be damaged in the following cases:
  - a. If you do not feel the button being pressed when you use a tool to press the part where the reset button is located.
  - b. If you hear the sound of separated parts moving when you lift the product.

[Reset button on the back of the product]

[Reset button broken and separated]

4. Measures

- Press the [Password Reset]] button with a sharp tip for about 15 seconds with moderate force.
- If there is no response when pressing the button with a tool, contact a designated repair shop for its repairs.

Voltage difference between the NVR cover and the building ground

|                |               |              |                              |
|----------------|---------------|--------------|------------------------------|
| No.            | # 7           | Product Line | NVR (models with adapters)   |
| Product(Model) | QRN-830S/430S | Keyword      | Power, Ground, Short circuit |

1. Installation Cases

- The NVR models were installed in office.

2. Symptoms

- There is a voltage difference between NVR Cover and building ground
- The neutral-to-earth voltage (NEV) is mistaken for leakage voltage

\* Neutral-to-Earth Voltage: It is an invalid power voltage caused by the potential difference between the neutral terminal and the earth when the earth is not connected (this phenomenon is not a defect in the product)

[NEV between Adapter Neutral terminal and GND]

3. Causes

- The NVR ground terminal was not connected.

4. Measures

- Follow the installation guide: Use the Ground terminal for ground connection.

|   |                   |  |
|---|-------------------|--|
| 2 | Ground Connection | Port for connecting a separate ground cable.<br>■ For safe handling of the device, please add a ground wire. |
|---|-------------------|--|

NVR DDNS connection failure

|                |          |              |  |
|----------------|----------|--------------|--|
| No.            | # 8      | Product Line | NVR  |
| Product(Model) | XRN-420S | Keyword      | External network connection error, DDNS connection failure |

1. Installation Cases

- There were an external network connection error and an DDNS connection failure.

2. Symptoms

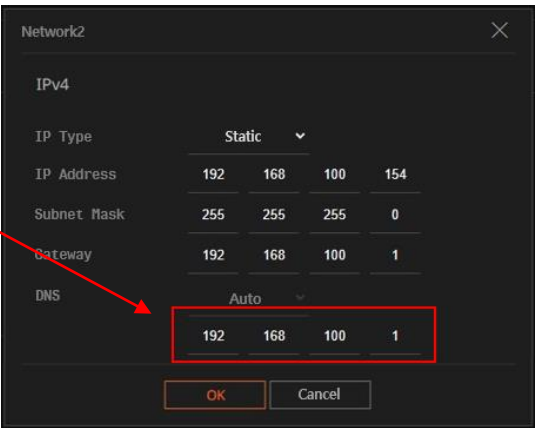

- The system was connected to the network, but DDNS was not accessible.

3. Causes

☒ Quick connect(UPnP) Failed to find a router. Check the router's configurations.

- "Auto" used for NVR DNS server IP address + error in Router's DNS IP setting [Incorrect Procedure]
  - (1)NVR DNS was set to "Auto"
  - (2)Entered the Router DNS IP incorrectly.
  - (3)The external domain was inaccessible
  - (4)DDNS connection failed

4. Measures

- Precautions for DNS IP settings
  - ① Auto : Recheck the router DNS IP address
  - ② Manual: Set the correct DNS server IP address (e.g. 168.126.63.1 / 8.8.8.8, etc.)

HDD not detected after NVR delivery

|                |             |              |  |
|----------------|-------------|--------------|--|
| No.            | # 9         | Product Line | NVR  |
| Product(Model) | XRN-3210RB2 | Keyword      | HDD tray being opened, HDD undetectability |

1. Installation Cases

- The product equipped with NVR HDD was delivered by courier

2. Symptoms

- The HDD wasn't detected, and the HDD bracket was open.

3. Causes :

- The product was delivered with its HDD installed.

4. Measures

- When delivering the NVR product, pack and transport the NVR and HDD separately to prevent damage.
- Do not move the product with the HDD installed.

**Delivering the product with its HDD installed is not covered by our product warranty.**

- Product design and shipment are verified and guaranteed under basic installation or NO-HDD conditions.
- In addition to the HDD tray being opened, there may be problems such as HDD undetectability, device deformation, and RAID recognition error.
